## Objectives

Enthusiastic problem solver with a passion for tackling challenges, believing they fuel continuous self-improvement. Eager to contribute innovative solutions, thrive in dynamic teams, and pursue ongoing personal and professional growth.

## Experience

### JavaScript Engineer

Root Force Marketer | Pune, India | June 2022- October 2022

- Building stable and maintainable codebases using React and Creating new features, functionality and capabilities on the website.
- Performing Bug Fixes and code reviews.
- Maintaining the responsiveness for all devices and Participating in team-building exercises.

## Programming & Other Skills

### Expertise

- JavaScript(ES6), React.js, Next.js, TypeScript, Redux, React Router, SPA, Firebase, HTML5, CSS3, Bootstrap 5, Tailwind CSS, Rest API, MongoDB,

### Comfortable

- Node.js, Express.js, C, DaisyUI, MYSQL, Linux, Netlify, Heroku, Stripe.js, PostgreSQL, Prisma, Vercel

### Familiar

- Redux, Next.js, Python, Django, AWS, Android(JAVA), Blockchain Technology

### Tools & Softwares

- VS Code, Android Studio, Chrome Dev Tools, PyCharm, Atom, GitHub, Stack Overflow

## Projects

**Squirrel Tools** : Web Application [ [Live Link](#) | [GitHub\(Client\)](#) | [GitHub\(Server\)](#) ]

Technologies : HTML5, CSS3, DaisyUi, Tailwind, React.js, Node.js, Express.js, Firebase, REST API, MongoDB, Stripe, React-Hooks

### Features

- Full-stack web application where admin and regular users have a different roles. Users can purchase after login, and also they can update their profile. All the user data is stored in MongoDB.
- For login Google and GitHub popup are used with email and password.
- Cannot reach the protected page like make the order without login, JWT token used to show each user data.
- Regular users can pay with a stripe payment method, and the admin can see the list of which product payment is made, and then the admin can ship the product status from pending.

## **Books Warehouse** : Web Application [ [Live Link](#) | [GitHub\(Client\)](#) | [GitHub\(Server\)](#) ]

Technologies : HTML5, CSS3, Tailwind, React.js, Node.js, Express.js, Firebase, REST API, MongoDB

### **Features**

- CRUD Application where users can add, read, delete & update.
- For login Google and GitHub popup are used with email and password.
- Cannot reach the protected page like make the order without login, JWT token used to show each user data & security.
- All the user data is stored in MongoDB.

## **Todo\_App** : Web Application [ [Live Link](#) | [GitHub\(Client\)](#) | [GitHub\(Server\)](#) ]

Technologies : HTML5, CSS3, Tailwind, DaisyUI, React.js, Node.js, Express.js, Firebase, REST API, MongoDB

### **Features**

- To take the to-do notes with a secured application.
- For login, Google popup used with email and password, and JWT token applied.
- To use the application user must log in, and submit the todo form. It saves the data in a table.
- In the table, the user can delete a task or complete the job using buttons, and deleting or completing data is saved in the MongoDB database for each user.

## **Restaurant Management** : OOP Project [ [GitHub](#) ]

Technologies : C++

### **Features**

- Restaurant Management system for customers and admins.
- Here, customers can place orders by seeing the items and price with the quantity they need.
- Admins with their admin pass can see the order that the customers placed.
- Admins can restock the items for the order.
